Methodology for NY-505 - Syracuse, Auburn/Onondaga, Oswego, Cayuga Counties CoC

Sheltered Population Total

1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).

2. Was the CoC able to collect information about the number of people being sheltered on the night of the count from all emergency shelters, Safe Havens, and transitional housing projects listed on the HIC or only some? listed on your HIC or only some?

- Complete census count

3. What information or method(s) was used to de-duplicate the count of the total number of people included in the sheltered population?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Blitz count of persons in shelters (i.e., count occurred at same time to avoid double counting)
- Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

Sheltered Subpopulation

4. What data source(s) was used to produce the demographic and subpopulation data included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? (select all that were used)

- HMIS Data
1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).
5. Was the CoC able to collect information about the demographic and subpopulation characteristics of all sheltered people or only some?

- All sheltered people

6. Looking at the change in your sheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below.

- Weather

Please provide a brief description of these specific factors (500 word limit):

In NY State there is an executive order in place that when the temperature is below 32 degrees farenheight, people experiencing homelessness are able to access emergency shelters in our CoC without undergoing typical intake and eligibility procedures. In addition, all shelter's suspensions and sanctions are lifted during this time. Though this executive order has been in place since 2016, local districts have increased awareness of this practice, which would account for the slight increase in our sheltered count due to it being below 32 degrees farenheight on the night of the PIT.

Unsheltered Population

7. What approach(es) was used to count the total number of people included in the unsheltered population during the PIT count. (select all that were used)

- “Night of the count” - complete census
- “Night of the count” - known locations
- Service-based count
7a. Were certain areas within the CoC geography specifically excluded because the CoC had reason to believe there were no unsheltered people in those areas?

No

7c. In areas that were canvassed, did the CoC count all unsheltered people in those areas or a sample of people?

- All people encountered during the count

8. What information or method(s) was used to de-duplicate the total count of people in the unsheltered population? (Check all that apply)

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Blitz count of unsheltered people (i.e., canvassing of different areas occurred at same time to avoid double counting)
Unsheltered Subpopulations

9. What approach(es) was used to collect demographic and subpopulation data about unsheltered people included in the unsheltered population during the PIT count?
   - Surveys/interviews of people identified as unsheltered on the night of the PIT count
   - Surveys/interviews of people identified as unsheltered on the night of the count, but completed at a later date

10. Were all people who were encountered during canvassing on the night of the count or during post night of the count PIT activities asked to complete a survey/interview?
    - All people encountered were surveyed

11. What information or method(s) was used to produce an unduplicated total count of homeless people across your sheltered and unsheltered populations?
    - Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
    - Blitz count of unsheltered people (i.e., sheltered and unsheltered counts occurred at same time to avoid double counting)
    - Interview/survey question(s) with screening questions (e.g., have you already completed a count survey)

12. Looking at the change in your unsheltered count from last year’s count, please choose up to three reasons that best explains these changes from the drop down list below
    - Increased or improved PIT count training
    - More volunteers for PIT count

Please provide a brief description of these specific factors (500 word limit):

The CoC had an increase of one unsheltered person on the night of the PIT count. There was an increase in volunteers as well as a large number of returning experienced volunteers. This allowed for broader geographic coverage, and better administration of surveys. Having experienced volunteers resulted in improved identification of unsheltered homeless individuals and improved data collection.
